Non Vascular Sterile Hydro Slide Guidewire

The Non Vascular Sterile Hydro Slide Guidewire is mainly used with endoscope, imports or guides other equipments into a predetermined position of non vascular natural orifice such as biliary duct, pancreatic duct and so on, and plays a supporting or guiding role. All guidewires are manufactured out of Nitinol with good shape memory physical and mechanical properties. Owing to their hydrophilic tips, the wires safely find their way even into areas and stenosis which are hard to reach. This is supported by the wire's high rigidity and controllability.

Performance Characteristics:

- The core is made of super elastic alloy to prevent kinking.
- The atraumatic distal tip is made of soft polymeric material with hydrophilic coating to facilitate ease of cannulation.

Specifications:

Non Vascular Sterile Hydro Slide Guidewire

REF	Maximum O.D. (in)	Working Length (cm)	Tip Style	Packaging
